

Calculations Policy

Date of Policy: **Spring 2013**

Person(s) Responsible for Policy: **Maths Subject Leader**

Committee Responsible: **C&S**

Term of Review: **Spring 2014**

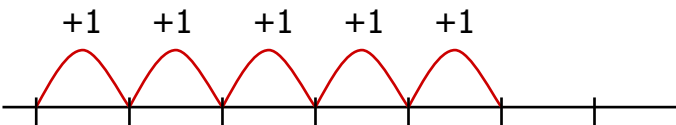

Swindon Village Primary School **Maths Calculations Policy**

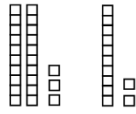

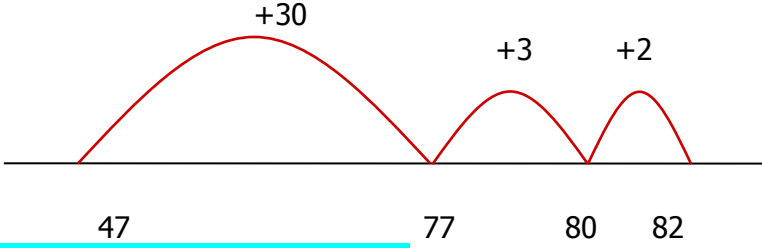

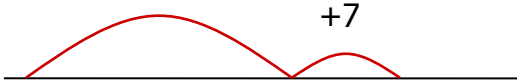

- This policy contains the key pencil and paper procedures that are to be taught throughout the school. It has been written to ensure consistency and progression throughout the school
- Although the main focus of this policy is on pencil and paper procedures it is important to recognise that the ability to calculate mentally lies at the heart of maths
- Mental calculation is not at the exclusion of written recording and should be seen as complementary to and not as separate from it. In every written method there is an element of mental processing
- Written recording both helps children to clarify their thinking and supports and extends the development of more fluent and sophisticated mental strategies
- Although each method will be taught in the year group specified, children should not be discouraged from using previously taught methods with which they are secure, while the new concepts are becoming embedded
- The long-term aim is for children to be able to select an efficient method of their choice that is appropriate for a given task. They should do this by always asking themselves:
 - 'Can I do this in my head?'
 - 'Can I do this in my head using drawings or jottings?'
 - 'Do I need to use a written method?'

Additionally, children are encouraged to adopt the 4 B's: Brain, Book, Buddy and Boss

Addition

The mental methods that lead to column addition generally involve partitioning, e.g. adding the tens and units separately, often starting with the tens as this is the larger part of the number. They can also include the use of number lines, tracks and squares for counting on.

Year Group	Progression Methods

Subtraction

Mental methods should involve counting back in single digit numbers, leading onto counting back in multiples of 10, possibly using a number square. Children find subtraction difficult particularly when they are introduced to column methods at an early stage when they are not ready for it. With continued practise and reinforcement, children will become very comfortable using counting on methods on a number line.

Year Group	Progression Methods
<p style="text-align: center;">R</p> <p><i>Practical/recorded using ICT (eg digital photos/pictures on IWB)</i></p> <p>Age related expectations:</p> <p>Subtraction as 'taking away' from a group</p>	<p style="text-align: center;">1. Multiplication

Early stages of multiplication will focus on groups and sets, leading onto the learning of multiplication tables facts up to 12×12 . Most children should have a secure knowledge of **all multiplication facts by the end of Year 4.**

The next stage is to learn how to multiply a 2-digit number by a 1-digit number. To do this, children will need to be able to partition the 2-digit number and multiply both the tens and the units part separately. This can be done using the grid method as shown below.

Year Group	Progression Methods
<p style="text-align: center;">R</p> <p><i>Practical/recorded using ICT (eg digital photos/pictures on IWB) pictures, objects and symbols</i></p> <p>Age related expectations:</p> <p>Count repeated groups of the same size (1s, 2s and 10s)</p>	<p style="text-align: center;">1. Division

Using written methods for division can be the most difficult for children. Early mental approaches should involve grouping and sharing. Discussing the sharing out of sweets is an example. When there are some left over, the term remainder can be introduced.

Year Group	Progression Methods
